

**IN THE CLAIMS:**

1. (Currently Amended) A mobile phone, comprising:  
~~a receiver for receiving radio frequency signals;~~  
~~a transmitter for transmitting said radio frequency signals;~~  
a digital memory for storing digital data including ~~wherein said digital memory includes~~  
downloaded data with executable software from an external data source; and  
run-time software configured to cooperate with said external data source to determine said  
downloaded data  
~~a digital processor for processing said digital data.~~
2. (Currently Amended) The mobile phone as recited in Claim 1 wherein said run-time software  
is pre-stored in said digital memory ~~further includes pre-stored run-time software.~~
3. (Original) The mobile phone as recited in Claim 1 wherein said external data source is a base  
transceiving station of a mobile communication system.
4. (Original) The mobile phone as recited in Claim 1 further comprising an interface for an  
exchange of said digital data with external digital devices.
5. (Original) The mobile phone as recited in Claim 4 wherein said external digital devices  
include at least one from the group consisting of: a personal computer,  
a database system at the location of a manufacturer,  
a database system at the location of a re-seller, and  
a database of an Internet data service provider.
6. (Original) The mobile phone as recited in Claim 1 further comprising a keyboard including  
at least a section wherein a layout thereof is defined by said downloaded data.

7. (Original) The mobile phone as recited in Claim 1 further comprising a main display including at least a section where dialogues or menus are displayed, said dialogues and said menus being provided by said downloaded data.
8. (Original) The mobile phone as recited in Claim 7 wherein said main display shows icons having associated functionality on a touch-screen area thereof wherein said icons and said associated functionality is provided by said downloaded data.
9. (Original) The mobile phone as recited in Claim 1 further comprising a loudspeaker and an electronic circuitry connected thereto for driving said loudspeaker, said downloaded data comprising melodies, speech messages or acoustic signals associated with functions of said mobile phone.
10. (Original) The mobile phone as recited in Claim 1 wherein said digital memory includes an electrically erasable programmable read-only memory (EEPROM).
11. (Original) The mobile phone as recited in Claim 1 further comprising an Internet interface for exchanging data with an Internet service provider.
12. (Original) The mobile phone as recited in Claim 1 wherein said downloaded data defines a menu structure for functions of said mobile phone.
13. (Currently Amended) A mobile communication system, comprising:
  - an external data source; and
  - a mobile phone, including:
    - ~~a receiver for receiving radio frequency signals;~~
    - ~~a transmitter for transmitting said radio frequency signals;~~

a digital memory for storing digital data including ~~wherein said digital memory~~  
~~includes~~ downloaded data with executable software from an external data source; and  
run-time software configured to cooperate with said external data source to determine said  
downloaded data  
~~a digital processor for processing said digital data.~~

14. (Original) The mobile communication system as recited in Claim 13 wherein said external data source includes a base transceiving station of a cellular mobile communication system.

15. (Original) The mobile communication system as recited in Claim 13 wherein said mobile communication system is a Global System for Mobile Communications (GSM) communication system.

16. (Original) The mobile communication system as recited in Claim 13 wherein said mobile communication system is a Universal Mobile Telecommunications System (UMTS) Code Division Multiple Access (CDMA) communication system.

17. (Original) The mobile communication system as recited in Claim 13 wherein said external data source is a base transceiving station of a mobile communication system.

18. (Original) The mobile communication system as recited in Claim 13 wherein said mobile phone further comprises an interface for an exchange of said digital data with external digital devices.

19. (Original) The mobile communication system as recited in Claim 13 wherein said mobile phone further comprises an Internet interface for exchanging data with an Internet service provider.

20. (Original) The mobile communication system as recited in Claim 13 wherein said downloaded data defines a menu structure for functions of said mobile phone.

21. (Currently Amended) A system for configuring a mobile phone, comprising:

an external data source;

an end user tool that facilitates a transfer of downloaded data with executable software to said mobile phone from said external data source; and

a mobile phone, including:

~~a receiver for receiving radio frequency signals;~~

~~a transmitter for transmitting said radio frequency signals;~~

an interface unit configured to exchange digital data with said external data source;

a digital memory for storing said digital data including ~~wherein said digital memory includes~~ said downloaded data with said executable software from said external data source; and

run-time software configured to cooperate with said external data source to determine said downloaded data

~~a digital processor for processing said digital data.~~

22. (Currently Amended) The system for configuring a mobile phone as recited in Claim 21 wherein said end user tool includes at least one tool selected from the group consisting of:

a Resource Editor,

a Resource Compiler and

a Resource Loader.

23. (Currently Amended) The system for configuring a mobile phone as recited in Claim 21 wherein said external source is configured to download data employing a layered approach ~~end-user tool includes a Resource Compiler.~~
24. (Currently Amended) The system for configuring a mobile phone as recited in Claim 21 wherein said run-time software ~~end-user tool~~ includes a Resource Loader that is configured to determine a compatibility of said downloaded data and said run-time software.
25. (Original) The system for configuring a mobile phone as recited in Claim 21 wherein said end user tool is run via the Web.
